

The SKIN
Collective

In case of emergency or if you have any concerns following this treatment please contact us.

It is important to follow the specific aftercare instructions provided to ensure the best possible healing and results. If you have any questions or concerns about the aftercare process, be sure to ask your practitioner for more guidance.

Lamprobe Aftercare

- After treatment with the Lam Probe the treated area may feel irritated and warm. Redness and scabbing may form.
- If your practitioner has bandaged/covered the area leave dry and covered for 24 hours.
- Make sure you do not pick at any scabs that do form as doing so may cause hyper pigmentation or scarring. - If the treated area is still irritated or warm later that night and the following day apply cold aloe vera/witch hazel or savlon cream.
- Keep the area dry during the daytime after irritation has stopped.
- You must use an SPF to protect your treated area for at least 4 weeks following treatment. We advise all year round in most cases (seek practitioner advice).
- Avoid direct sunlight, especially in peak hours.
- When cleansing please avoid products with alcohol.
- Pat the area dry after cleansing with a clean towel do not rub as this can remove scabs and cause scarring.
- Do not use any bleaching or peeling products for at least 21 days.
