Micro Needling Aftercare

- I understand I am not to use any perfume, perfumed cosmetics, skincare products or any fragranced products after the procedure unless specified as part of my microneedling therapy home care regime.
- I understand that if I experience any adverse reactions that appear to be attributable to my use of home care products I must discontinue use of the products and notify the clinic immediately. It is important to note that not all skincare products are suitable when using Microneedle Therapy System.
- I understand direct sun exposure and tanning bed use is **STRICTLY PROHIBITED**. I agree to use the recommended sun protection products on a daily basis.
- If I fail to protect my skin from sun exposure I will be at risk for uneven pigmentation and sunburn.
- I understand the use of saunas and any heat treatments are not allowed for a period of at least 2 weeks after the procedure and this includes home care protocols.
- I understand it is quite normal for mild sensitivity and redness after treatment. The skin may resemble moderate sunburn as the skin naturally heals the redness will resolve. The skin may remain red for three to four days after treatment although it is usual for it to subside within two days and many people are able to return to their normal activities the same or next day.

- Hands should be thoroughly washed or sanitised before touching the treated skin area or applying skincare products to the area immediately after and in the first two days after the procedure.

It is important to follow the specific aftercare instructions provided to ensure the best possible healing and results. If you have any questions or concerns about the aftercare process, be sure to ask your practitioner for more guidance.
